

# POWERLIFT 1000 OVER

## THE POWERLIFT 1000 OVER BARI LIFT AND TRANSFER™

Overhead assists and enhances patient mobilization and reduces workers' compensation claims associated with patient handling. This transfer system is the most versatile lift system available, designed to help patients out of bed and into a wheelchair or shower/commode chair. This product is available in 750 or 1000 lb. weight capacity.

The Bari Lift and Transfer™, Overhead allows lifting from the floor level and creates a safer environment to properly transfer the patient while protecting caregivers from injury. Available options include built-in scales and multiple sling types to choose from, including commode slings.

The Bari Lift & Transfer System is intended to be used as a transfer device designed especially for larger individuals who have limited mobility due to a physical condition. The lift operates on a track which enables the caregiver to lift the individual from, for example, a bed across to a wheelchair or commode. It is not designed to move the individual from one room to another

### Key Product Features

- Helps reduce patient and staff injuries that may occur during transfer.
- Heavy-Duty frame with expandable base is tip-resistant for patients and residents up to 1000 lb weight capacity.
- Lifting height adapts from the floor to the highest hospital beds.
- Features simple push button operation hand control for ease of use.
- Digital scale up to 1000 lb weight capacity (optional).
