

AME APWC18, AME APWC22, AME APWC26, AME APWC30 POWERED ALTERNATING PRESSURE WHEELCHAIR CUSHION

APWC18, AME APWC22, AME APWC26, AME APWC30

The Cushion is a battery powered alternating pressure seat cushion and control power unit.

The device is an active alternating pressure seat cushion system and consists of a reliable pump and seat cushion providing the best pressure relief. It equips with a fully digitalized pump and each function made can be adjusted individually, such as cycle time and comfort range.

It provides you the total pressure management control and runs on AC power supply or a Ni-MH rechargeable battery.

Battery

- Rechargeable Ni-MH battery with LED indicator
- Cushion can also be used while plugged into mains power source. This also charges the battery (takes approx 8 hours)

Cover

- Removable, water resistant, vapor permeable and fire retardant stretch PU cover
- Cover can be wiped clean and is washable

Accessories

- **Cushion pocket to hold power control unit on back of wheelchair**

Power Control Unit

- Visual and audible operating status and fault indicator.
- Static or alternating therapy mode.
- Cycle time is 10, 15, 20 minutes.
- 5 Comfort select to accommodate different patient weight.
- An audio alarm indicating low pressure or low battery, with alarm mute function.

Factors To Consider

- All cushions must be monitored to prevent 'bottoming out'. This occurs when the user's weight bears down so hard on the product material that it is flattened and the bony parts are pressed against the surface below the cushion. Where bottoming out occurs even with correct use (e.g. correct choice and depth of foam, correct inflation level) , a different product may need to be considered.
- Ensure that the item is not accidentally placed upside down or back to front.
- It is advisable that a health professional be consulted when considering a suitable pressure care product.

Key Product Features

- Powered alternating pressure wheelchair cushion.
- Designed to distribute pressures and stimulate blood flow.
- Rechargeable battery powered, portable fully digitized pump.
- Adjustable alternating pressure cycle time, adjustable comfort control.
- Safety features include battery status indicator, and low pressure alarm.
- Seat cushion is constructed of quality pliable nylon and breathable top cover.
- Seat widths 18" (APWC18); 22" (APWC22); 26" (APWC26); 30" (APWC30) .
