

# BRODA PEDAL CHAIR

## THE BRODA PEDAL CHAIR

The Broda Pedal Chair is ergonomically designed to encourage self-mobility. It's an excellent option for residents who can self-propel within a facility and allows a proper foot on floor position. The Pedal Chair is a comfortable, safe, and stable alternative to an indoor wheelchair.

*It is ideal for long-term care facilities and acute-care facilities for:*

- Residents who are self-mobile, but lack strength and stability.
- Residents requiring light to medium levels of care.

The floor to seat height adjustment accommodates both short and tall residents, adjusting from 12.5" to 17.5".

With up to 18° of infinitely adjustable seat tilt, the Pedal Chair aids in preventing residents who foot propel from pulling themselves off the seat without the use of restraints. The tilt-in-space design allows infinite positioning in a constant amount of space, preventing slumping and sliding without use of restraints.
