

# BARILIFT SCALE 1000

## BARILIFT 1000 SCALE

The Barilift 1000 Scale adds new life and function to your existing patient lifter. Simply attach between your boom arm and hanger bar and you have just turned your patient lifter\* into a precision scale system. This workhorse is built to last with the quality and reliability you've come to expect from SR® Scales.

The Bari 1000 Weight Module is a compact precision scale system designed for use with approved\* lifter designs employing compatible boom and hanger configurations.

Completely self-contained, the Bari 1000 Weight Module combines the latest microprocessor and load cell technology to provide accurate and repeatable weight data with a calibrated accuracy of 0.1%.

One button Auto-Zero Electronics makes patient weighing quick and easy. The Bari 1000 Weight Module derives its power from a single 9-volt battery which will provide up to 3000 readings.

## KEY PRODUCT FEATURES

- Light Weight - Weighs just over 1 pound. Bring it with you when you need it.
- Built to Last - Load cell is machined from a single block of steel to maximum strength and performance.
- Accurate - Display patient weight data with 0.1% accuracy
- Battery Operated - 1 common 9v alkaline battery providing approximately 3,000 weigh cycles
- Programmable Auto Power Down (APD) to conserve power.
- Time Saver - Combine tasks to limit patient handling
- One Button Auto-Zero - Tare your seat sling to zero and you're ready to weigh
- \*The model shown fits the Hoyer® type patient lifter. Other configurations are available. Please call for a configuration that is compatible with your specific patient lifter - see product brochure for details
