

## SAFETY FLOWT® LOW AIR LOSS / FALL PREVENTION

Full thickness, non-powered advanced wound care therapy mattress system. Micro-conforming distribution system with 130 interconnected air cells. 4 zones of 35 air cells are customized to optimal pressure distribution for each body zone. ROHO technology air cells react immediately to any slight patient movement to provide continuous reactive pressure redistribution. Air exchanges and circulates between cells to manage moisture. Waterproof, breathable four way stretch top cover allows for full immersion without resistance. 3" multi-density base layer adds safety and comfort. Middle layer waterproof barrier to protect base layer from contamination/odors.

Non-skid bottom cover with handles. Exterior air port for inflation and use of optional accessories (Optimizer, Smart Series). Integrated raised perimeter with egress openings for fall prevention.

### Key Product Features

- Combines low air loss therapy with ROHO technology
- Ideal for moisture management applications
- Available in multiple air flow settings (8-50LPM)
- FALL PREVENTION
- Measures the absence of pressure in multiple zones
- Sounds an audible alarm when unplanned bed exit is likely
- Highly effective to reduce costly patient falls
